Description

Omega 7 is an essential fatty acid with very special properties.

When the body gets more sugar than can be used, the excess sugar gets stored as fat. Omega 7 fatty acids help to balance the insulin household and can therefore greatly reduce this fat storage process. If you tend to put on weight easily, Omega 7 fatty acids can be a strong ally in your battle against fat.

Omega 7 fatty acids also supply fatty acids to the skin which leads to a fresher and younger looking skin. Together with the better known Omega 3 6 and 9 fatty acids, Omega 7 can be a useful addition for a healthy diet.
