Description

Marine Mineral Capsules contain Aquamin, a Multimineral powder with bioactive Calcium, Magnesium and 72 other trace elements. Aquamin is made from the Lithothamnion algae, which grows in the sea off the Icelandic coast. Under water, the algae absorbs minerals from the seawater and stores these. After harvesting, the algae is dried and then powdered. The molecules of this powder have a special porous surface which improves the bioavailability of the minerals considerably.

Aquamin Marine Mineral complex is plant and therefore also suitable for people with a vegan lifestyle.

Aside from Calcium, Marine Mineral Complex contains more than 72 trace elements. The quantity of each element may be quite small but it is the unique combination which makes this product something special. The ingredients have a synergistic effect which helps the body to absorb the Calcium even better.
